ACKNOWLEDGMENTS

The BEA input-output study for 1972 was prepared under the direction of Philip M. Ritz, Chief of the Interindustry Economics Division; Eugene P. Roberts, Assistant Chief; and Paula C. Young, Chief of the Input-Output Structures Branch. Guidance was provided by Martin L. Marimont, Associate Director for National Economic Accounts, and Albert J. Walderhaug, Chief of the Research and Analysis Branch of the Division. Important contributions were made by the following persons in the Division.

E. Louise Adams, William A. Allen, Jr., Stevan T. Augustin, Claiborne M. Ball, John J. Benton, Jr., Peggy L. Burcham, Antoinette S. Coniglio, Peter E. Coughlin, Marjorie S. Crenshaw, Ray N. Dryden, Jr., D. Anne Fisher, John C. Hartley, Carolyn B. Knapp, Robert T. Mangan, Steven K Martin, Paul E. Myers, Jr., David R. Nelson, Gary L. Olin, Mark A. Planting, Anne L. Probst, Karen D. Redman, Elizabeth G. Rhodes, Robert S. Robinowitz, Austin L. Schmitt, Jr., Howard L. Schreier, Sharon R. Scott, Roy A. Seaton, II, Nancy W. Simon, Elizabeth T. Spaulding, George M. Swisko, Joanne S. Thompson, Kenneth A. Wallach, Lucy J. Wayne, John R. Welty

Estimates for the agricultural industries were prepared by Gerald Schluter and staff, Economic Research Service (now Economics, Statistics, and Cooperative Service), U.S. Department of Agriculture. Some of the estimates for the mineral industries were provided by the Bureau of Mines, U.S. Department of Interior.

PREFACE

This volume is one of two that contain the basic tables for BEA's 1972 input-output study at the full detail of 496 industry/commodity components:

The Detailed Input-Output Structure of the U.S. Economy: 1972

Volume I—The Use and Make of Commodities by Industries, 1972

Part I—Table 1.—The Use of Commodities by Industries, 1972
Part II—Table 2.—The Make of Commodities by Industries, 1972

Volume II—Total Requirements for Commodities and Industries, 1972

Part I—Table 4.—Commodity-by-Commodity Total Requirements, 1972
Part II—Table 5.—Industry-by-Commodity Total Requirements, 1972

The 1972 input-output study is described more fully in the article, "The Input-Output Structure of the U.S. Economy, 1972," appearing in the February 1979 **SURVEY OF CURRENT BUSINESS**, and the article, "Dollar-Value Tables for the 1972 Input-Output Study," appearing in the April 1979 **SURVEY**. The articles present summary tables for 1972 in which the detailed 496 order industry/commodity categories are aggregated to the 85-order level. The first article explains the relationship of the input-output tables to the national income and product account; discusses differences between the 1972 table and earlier benchmark input-output tables; and discusses various uses of input-output tables.

The use table (table 1 in part I of Volume I) shows for 1972 the dollar values of the use of commodities (goods and services) by industries, the sales of each commodity to final demand, and the value added originating in each industry. Each row of table 1 shows the distribution of output of the commodities identified by input-output code at the beginning of the row to each of the industries and final users identified across the top of the table. The columns show the value of each industry's current consumption (input) of commodities and its value added in production.

The make table (table 2 in part II of Volume I) shows the dollar value of production of each commodity by each industry. Table 2 is presented in two ways to identify the relationship between industries and commodities. Table 2A shows "Industries Producing Each Commodity" and table 2B shows "Commodities Produced by Each Industry."

NOTE.—The two volumes of "The Detailed Input-Output Structure of the U.S. Economy: 1972" may be purchased from the U.S. Government Printing Office, Washington, D.C. 20402 at the cost of $. for Volume I and $. for Volume II. Checks should be made payable to the Superintendent of Documents. Reprints containing the two articles with the 85-industry commodity table, published in the February and April 1979 **SURVEY OF CURRENT BUSINESS**, may be purchased for $3.25 from the same source.

The February 1979 **SURVEY** article includes a table 3, "Commodity-by-Industry Direct Requirements, 1972." The comparable 496 order table is not shown in either of these volumes. The reader can readily calculate the detailed input coefficients that would make up table 3 from the dollar value inputs in table 1 of Volume I.

Volume II contains two total requirements tables. Table 4, "Commodity-by-Commodity Total Requirements, 1972," was prepared from the material in tables 1 and 2,[1] and it shows the direct and indirect effects of final demand on commodity output. Each column of table 4 shows the production required directly and indirectly of the commodity named at the beginning of each row per dollar of delivery to final demand of the commodity named at the head of the column.

Table 5, "Industry-by-Commodity Total Requirements, 1972," was prepared from the material in tables 2 and 4.[2] Each column of table 5 shows the production required both directly and indirectly of the industry named at the beginning of each row per dollar of delivery to final demand of the commodity named at the head of the column.

In the tables, the individual industries and commodities and each of the final markets are identified by numerical code. Titles for the codes and the definitions of the industries in terms of the Standard Industrial Classification (where relevant) are provided in "Industry Classification of the 1972 Input-Output Tables," pages 4 to 7. Value added, which appears as a single entry for each industry in table 1, is identified by the letters V.A. Alphabetic codes for various totals and subtotals in table 1 also appear in the classification list.

1. The derivation of this table is shown in the "Mathematical Derivation of the Total Requirements Tables for the 1972 Input-Output Study," available on request from the Bureau of Economic Analysis, Interindustry Economics Division (BE-51).

Features of the Detailed Input-Output Study for 1972

Description of the tables

The results of the 1972 input-output study were presented at the 85- industry/commodity level in articles in the February and April 1979 issues of the **SURVEY**. Along with a number of supplementary tables and other descriptive materials, mentioned in the preface to this volume, five basic tables were presented: (1) Use table, (2) make table, (3) commodity- by-industry direct requirements table, (4) commodity-by-commodity total requirements table, and (5) industry-by-commodity total requirements table. In the two volumes that comprise "The Detailed Input-Output Structure of the U.S. Economy, 1972," the tables are shown at the 496 industry/commodity level. However, table 3 is not shown, because it has only limited use and can be readily calculated from the dollar-value transactions data in the use table (table 1).

Each of the tables presented in the two volumes is preceded by a page describing the salient features of the table organization and the meaning of the numbers. For further details, see the preface to this volume, pages 37-42 of the February article, and pages 51-53 of the April article.

Definitions and conventions

Classification of industries and commodities.—In these volumes, production is classified into 496 industry/commodity categories. The categories, their input-output numbers and their 1972 Standard Industrial Classification (SIC), where applicable, are given on pages 4 to 7. At this detailed level, there are 494 intermediate industries and two commodities that are not industries (noncomparable imports, I-O 80.0000, and scrap, used, and secondhand goods, I-O 81.0000). Final demand categories, which appear only in table 1, are not included in this count.

Of the 494 industries, 483 are combinations of industries that are identified in the SIC. Seven are government enterprises, which are identified as such in the input-output system. Four are special industries established because they improve the classification for input-output purposes. They are government industry (I-O 82.0000), rest of the world industry (I-O 83.0000), household industry (I-O 84.0000), and inventory valuation adjustment (I-O 85.0000). Earlier input-output tables included two additional "dummy" industries, the business travel, entertainment, and gifts industry, and the office supplies industry. The commodities previously included in these two industries are distributed directly to consuming industries and final demand in the 1972 table.

In the 1972 input-output study, there are five industries for which there are no commodities. They are forest products (I-O 2.0701), Federal electric utilities (I-O 78.0200), Commodity Credit Corporation (I-O 78.0300), local government passenger transit (I-O 79.0100), and State and local electric utilities (I-O 79.0200). Thus, there are 491 commodities in the 1972 input-output study. For the 489 commodities other than those represented by I-O 80.0000 and I-O 81.0000, each commodity represents the production of the primary product of the industry with the identical name (and is given the same I-O number) and the production of that commodity as secondary output of other industries.

Trade.—The input-output tables do not trace actual flows of commodities to and from trade. If trade were shown as buying and reselling commodities, industrial and final users would make most of their purchases from a single source—trade. To show the links between the production of commodities and purchases of them by industrial and final users, commodities are shown as moving directly to the users, bypassing trade. The production of trade is measured by gross margins, that is, operating expense plus profit.

There has been one change from earlier tables in the definition of the retail trade industry. Eating and drinking places (I-O 74.0000) has been taken out of retail trade and established as a separate industry.

Valuation of transactions—In the input-output tables, the underlying valuation is at producers' prices, including excise taxes collected and paid by the producer. Such prices exclude distribution costs (trade margins and freight costs). Purchases of commodities from industries other than trade and transportation by industrial and final users are valued at producers' prices; these users make separate purchases of trade margins and freight costs from the trade and transportation industries, respectively.

Secondary products.—The treatment of secondary products in the 1972 input-output study differs substantially from that in earlier studies. In the past, selected secondary products were redefined, that is, the secondary product and associated inputs were excluded from the industry that produced it but included in the industry to which it was primary. The secondary product that was redefined differed considerably from the industry's primary product and was usually a significant proportion of the industry that produced it or of the commodity to which it was redefined. All other secondary product was transferred, that is, treated as if it were sold by the producing industry to the industry to which it was primary and added to the output of that industry for distribution to users.

In the 1972 input-output study, all secondary product is redefined. The 1972 redefinitions are of two kinds. The first kind is reflected in tables 1 and 2, and therefore in the three other basic tables. The second kind is reflected only in tables 4 and 5. For the first kind of redefinition, the inputs associated with the redefined products were estimated on the assumption that the input coefficients applicable to that product were the same as those of the industry to which the product is primary. This kind of redefinition was used in the following cases:

1. Construction work performed by all industries was redefined to the construction industries.
2. Manufacturing in trade and service industries was redefined to the manufacturing industries.
3. Retail trade in service industries was redefined to the trade industries. Services in the trade industries were redefined to the service industries. Selected services were redefined within the service industries.
4. Manufacturers' wholesale sales of purchased goods (resales) were redefined to the wholesale trade industry (69.0100).
5. Rental activities of all industries were redefined to the real estate industry (71.0200).
6. Electricity produced and sold by mining, manufacturing, and railroad industries was redefined to utilities.

Items 1-3 had been redefined in earlier input-output tables; items 4-6 were redefined for the 1972 tables.

The second kind of redefinition was used for all other secondary product. The inputs associated with the redefined product were estimated on the assumption that the input coefficients applicable to that product were the same as those of the industry from which the product was redefined.

Imports—Imported commodities that are comparable to domestically produced commodities, whether used by industrial users or by final users in substantially the same form in which they are imported, are included with the distribution of the output of the comparable domestically produced commodity. Their domestic port value is shown as a negative entry in the inport column of final demand (table 1, column 95.0000), so that the row total for each commodity equals the domestic production of that commodity.

Imports that are not comparable to domestically produced commodities are shown in the row for noncomparable imports (row 80.0000) at foreign port value. The total value of all such imports is shown as a negative entry in the import column (table 1, row 80.0000 at column 95.0000).

The treatment of comparable imports differs from that in earlier input- output tables. Imports for industrial use were shown as if purchased by the industry producing the comparable commodity and added to that industry's output for distribution to using industries; imports purchased by final users were shown as purchased directly from the row of directly allocated imports. The aggregate of comparable imports used by industries and the total of all other imports (i.e., comparable imports used by final users and all noncomparable imports) were shown in the earlier studies as negative entries in the net export column at the import rows. The treatment of noncomparable imports (though more narrowly defined) is the same in the 1972 and earlier input-output studies.

Gross output and gross input: industry and commodity.—Gross output of an industry is the total production of an industry and consists of its primary product and those of its secondary products for which the second kind of redefinition is used. Gross input of an industry is the sum of the input of commodities and value added required to produce the industry's gross output. Gross output equals gross input for each industry.

The gross output of a commodity equals the domestic output of the commodity, whether produced as primary product or as secondary product.

Inventories.—Table 1 shows for each commodity (listed at the beginning of the rows) inventory change, which is a component of final demand. The table also shows for each commodity consumption of the commodity by industrial users and by the other components of final demand. Thus, the total for each row, that is, consumption plus inventory change less comparable imports, is the total domestic production of each commodity. It shows the change in inventories of a commodity wherever held.

1. The industry classification is usually identical with that for the commodity which is the primary product of the industry. However, for some industries the primary product, or a component thereof, is the same as the primary product of another industry. In such cases, commodity output is included with the industry most definitively associated with the commodity, usually the largest producer.

2. Excluding government enterprises.

3. In the 1972 SIC, government enterprise activities are generally classified with the similar private activity. In I–O, activities of enterprises are classified in groups 78 and 79 and the corresponding SIC's are shown except for 78.0400 and 79.0300, each of which includes a number of SIC's and several activities for which no comparable SIC exists.

Part I

Table 4.—Commodity-by-Commodity Total Requirements, 1972

[Producers' prices]

Each entry represents the output required, directly and indirectly, of the commodity named at the beginning of the row for each dollar of delivery to final demand of the commodity named at the head of the column.

Table 4 consists of 487 rows and 487 columns. The commodities excluded from both rows and columns are: government industry (I-O 82.0000), rest of the world industry (I-O 83.0000), household industry (I-O 84.0000), and inventory valuation adjustment (I-O 85.0000). The table was derived from the material in tables 1 and 2 of Volume I. The derivation of the table is explained in the "Mathematical Derivation of the Total Requirements Tables for the 1972 Input-Output Study," available on request from the Bureau of Economic Analysis, Interindustry Economics Division (BE-51).

Part II

Table 5.—Industry-by-Commodity Total Requirements, 1972

[Producers' prices]

Each entry represents the output required, directly and indirectly, from the industry named at the beginning of the row for each dollar of delivery to final demand of the commodity named at the head of the column.

Table 5 consists of 489 rows (industries) and 485 columns (commodities). The five industries excluded are: Commodity Credit Corporation (I-O 78.0300), government industry (I-O 82.0000), rest of the world industry (I-O 83.0000), household industry (I-O 84.0000), and inventory valuation adjustment (I-O 85.0000). The two additional commodities excluded are: noncomparable imports (I-O 80.0000) and scrap, used, and secondhand goods (I-O 81.0000). The table was derived from the material in table 2 of Volume I and table 4 of Volume II. The derivation of this table is explained in the "Mathematical Derivation of the Total Requirements Tables for the 1972 Input-Output Study," available on request from the Bureau of Economic Analysis, Interindustry Economics Division (BE- 51).

Materials on the 1972 Input-Output Study

Since issuance in February and April 1979 of the two articles on "The Input-Output Structure of the U.S. Economy, 1972," a number of materials related to the 1972 study have become available. First, the two articles have been combined in a reprint with the above title. Single copies are available from the Interindustry Economics Division (BE–51), U.S. Department of Commerce, Washington, D.C. 20230, Additional copies may be secured from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, Stock Number 003–010–000–63–5, at $3.25 per copy.

Second, the input-output tables for 1972, at three levels of detail, are available on computer tape, as follows:

Accession number	*Level of detail*	*Price*
BEA–IED 79–002	85: all data	$200
BEA–IED 79–003	365: transactions and direct requirements	200
BEA–IED 79–004	365: total requirements	200
BEA–IED 79–003 & 004	365: all data	350
BEA–IED 79–005	496: transactions and direct requirements	200
BEA–IED 79–006	496: total requirements	200
BEA–IED 79–005 & 006	496: all data	350

All tapes are generated on a Honeywell 2050A and are 9-track, odd parity, EBCDIC. Purchaser must specify either 800 or 1600 bits per inch (BPI) and with or without header and trailer labels. Checks must be made payable to Department of Commerce/BEA and sent with the order to U.S. Department of Commerce, BEA Budget Office (BE–15), Room 718, Tower Building, Washington, D.C. 20230.

Also available on computer tape are the "Work File for the 1972 Input-Output Study, Without Source Notes" (BEA IED 79–007) and "Work File Source Notes" (BEA IED 79–008); the first costs $200 and the second $150. In addition, a computer tape on "Detailed Item Purchases by the Construction Industry, 1972" (BEA IED 79–009) is available for $200; a printout of the data is available for $125. Also, a computer tape on "Personal Consumption Expenditures and Producers' Durable Equipment Item Detail in the 1972 Input-Output Study" (BEA IED 79–010) is available for $200; a printout of the data is available for $75.

Four tables at the 496-order level of detail, similar to tables A, B, C, and D (at the 85-order level) in the April 1979 SURVEY article are available upon request from the Interindustry Economics Division. They are: Table A.—Sales of Specified Commodities to Each Category of Final Demand, in Producers' and Purchasers' Prices, 1972; Table B.—Detailed Input-Output Commodity Composition of Personal Consumption Expenditures, 1972; Table C.—Detailed Input-Output Commodity Composition of Producers' Durable Equipment Expenditures, 1972; and Table D.—Comparable Imports in Foreign Port Value and Domestic Port Value, 1972.

In addition, single copies of the BEA staff paper, "Updated Input-Output Table of the U.S. Economy: 1972," are again available from the Interindustry Economics Division. Additional copies may be purchased from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161. The price is $5.25 for paper copy and $3.00 for microfiche. Ask for BEA–SP 79–032.
